

BUCR Platform

End-to-End QA Audit Report

April 2026

Executive Summary

Category	Critical	High	Medium	Low	Info	Total
Database Schema	2	3	4	2	0	11
Backend Services	1	4	3	2	0	10
API Routes	2	3	5	3	2	15
Vendor Portal	0	2	4	3	0	9
Admin Portal	0	1	3	2	0	6
Mobile App	1	3	5	2	0	11
TOTAL	6	16	24	14	2	62

1. Database Schema

CRITICAL 1.1: User model has no role field

Detail: UserRole enum exists but is NOT on User model. Auth role from JWT only, no DB enforcement.

Fix: Add ``role UserRole @default(user)`` to User model + migration.

CRITICAL 1.2: VendorBranch missing vendorId index

Detail: Queried heavily by vendorId but no index. Full table scans on dashboard.

Fix: Add ``@@@index([vendorId])``.

HIGH 1.3: MenuCategory & Menu missing vendorId indexes

Detail: Queried by vendorId on every menu page load, no indexes.

Fix: Add ``@@@index([vendorId])`` to both.

HIGH 1.4: GalleryImage missing vendorId index

Detail: Queried by vendorId on gallery page.

Fix: Add ``@@@index([vendorId])``.

HIGH 1.5: Experience missing vendorId + isActive indexes

Detail: Queried by vendorId+isActive for public listing.

Fix: Add ``@@@index([vendorId])`` and ``@@@index([isActive])``.

MEDIUM 1.6: Multiple models missing vendorId indexes

Detail: VendorDocument, GuestProfile, Achievement, SpecialOffer lack indexes.

Fix: Add `@@index([vendorId])` to each.

MEDIUM 1.7: Invitation missing reservationId index

Detail: Queried by reservationId for reservation details.

Fix: Add `@@index([reservationId])`.

MEDIUM 1.8: Waitlist missing vendorId + status indexes

Detail: Queried by vendorId and status.

Fix: Add `@@index([vendorId])` and `@@index([status])`.

MEDIUM 1.9: VendorSubscription missing composite index

Detail: checkExpiredSubscriptions queries by expiresAt+tier, no composite.

Fix: Add `@@index([subscriptionExpiresAt, subscriptionTier])`.

LOW 1.10: Review + Favorite missing userId indexes

Detail: Queried by userId for user lists.

Fix: Add `@@index([userId])` to both.

2. Backend Services

CRITICAL 2.1: token.service.ts uses in-memory Map

Detail: Tokens lost on restart; no scaling; memory leak risk.

Fix: Migrate to Redis or DB-backed store.

HIGH 2.2: order_payment handler is no-op

Detail: payment.service.ts:416 - confirmOrderPayment() never called after Paystack payment.

Fix: Call confirmOrderPayment() in order_payment handler.

HIGH 2.3: GuestProfile never updated

Detail: checkIn doesn't increment visitCount/lastVisit; noShow doesn't record either.

Fix: Add guest profile updates in checkIn and markNoShow.

HIGH 2.4: Notifications never sent

Detail: sendReservationConfirmation etc. exist but never called from services.

Fix: Add notification calls in create/checkIn/noShow/cancel flows.

HIGH 2.5: adjustment credit type has no function

Detail: CreditTransactionType includes adjustment but no service creates it.

Fix: Add adjustUserCredits() and adjustVendorCredits() to credit.service.ts.

MEDIUM 2.6: Missing service files

Detail: Reviews, guest-profiles, experiences logic inline in routes.

Fix: Extract to dedicated service files.

MEDIUM 2.7: No notification scheduling

Detail: Reservation reminders should be automated.

Fix: Create notification.service.ts with scheduled reminders.

MEDIUM 2.8: Credit expiry not automated

Detail: processExpiredCredits requires manual trigger.

Fix: Set up cron job to call /api/cron/credits daily.

LOW 2.9: Unused functions

Detail: generateQRCodeBuffer, uploadFromUrl never called.

Fix: Remove or wire up.

3. API Routes

CRITICAL 3.1: Mobile favorites remove URL mismatch

Detail: Calls DELETE /users/favorites?vendorId=X but route is DELETE /users/favorites/[id]. 404.

Fix: Fix mobile to call DELETE /users/favorites/[id] or fix route to accept vendorId.

CRITICAL 3.2: Mobile profile update method mismatch

Detail: Calls PUT /users/profile but route only has PATCH. 405 error.

Fix: Change mobile to use PATCH or add PUT handler.

HIGH 3.3: No POST /orders user route

Detail: Mobile order screen has no creation API.

Fix: Add user-facing order creation route.

HIGH 3.4: No GET /users/orders route

Detail: Mobile order history needs this; only /vendor/orders exists.

Fix: Add GET /users/orders route.

HIGH 3.5: GET /experiences ignores filter params

Detail: Mobile sends vendorId/featured params but backend ignores them.

Fix: Add query filters to experiences route.

MEDIUM 3.6: No POST /waitlist endpoint

Detail: Schema has Waitlist model but no API.

Fix: Add waitlist routes.

MEDIUM 3.7: No POST /reservations/[id]/invite

Detail: Schema has Invitation model but no API.

Fix: Add invitation routes.

MEDIUM 3.8: No cron scheduler

Detail: processExpiredCredits and checkExpiredSubscriptions never triggered.

Fix: Set up Vercel cron or external scheduler.

LOW 3.9: Dev-only seed endpoint in prod

Detail: POST /vendor/menu/categories/seed should be guarded.

Fix: Add env check or remove.

LOW 3.10: SSE realtime endpoint unused

Detail: GET /api/realtime/events has no consumer.

Fix: Implement or remove.

4. Vendor Portal

HIGH 4.1: Login response shape mismatch

Detail: Expects {token, refreshToken} but backend returns {tokens: {accessToken, refreshToken}}.

Fix: Fix authApi.login to match backend response shape.

HIGH 4.2: Dashboard hardcodes change values

Detail: +12%, +8%, +23% are not calculated from real data.

Fix: Wire to actual analytics data.

MEDIUM 4.3: Notification bell hardcodes badge 3

Detail: Not connected to real notification count.

Fix: Wire to notification API.

MEDIUM 4.4: useRealtimeSync connects but doesn't consume

Detail: Wastes connection; no real SSE consumption.

Fix: Implement or remove hook.

MEDIUM 4.5: No branch management UI

Detail: API routes exist at /vendor/branches but no portal page.

Fix: Add branch management page.

MEDIUM 4.6: Special offers page may be display-only

Detail: No POST/PUT API integration visible.

Fix: Verify and complete integration.

LOW 4.7: No loading skeletons on most pages

Detail: Only dashboard has loading state.

Fix: Add skeleton loaders.

LOW 4.8: Image carousel no touch/swipe

Detail: Mobile viewport users can't swipe images.

Fix: Add touch gesture support.

5. Admin Portal

HIGH 5.1: No branch management page

Detail: Schema has VendorBranch, API exists, but no admin UI.

Fix: Add branch management page.

MEDIUM 5.2: Notifications page placeholder

Detail: No notification backend service.

Fix: Implement notification service + UI.

MEDIUM 5.3: No audit log viewer

Detail: AuditLog model and routes exist but no frontend.

Fix: Add audit log viewer page.

MEDIUM 5.4: Reports may lack full export

Detail: Generate endpoint exists but CSV/PDF export may be incomplete.

Fix: Verify and complete export functionality.

LOW 5.5: No content management page

Detail: Promos/banners have no admin UI.

Fix: Add content management page.

6. Mobile App

CRITICAL 6.1: Missing ordersApi in api.ts

Detail: No order creation/history/cancel endpoints defined in mobile API client.

Fix: Add ordersApi with create, getAll, getById, cancel, confirmPayment.

HIGH 6.2: Missing waitlistApi

Detail: Waitlist screen likely non-functional without API client.

Fix: Add waitlistApi to api.ts.

HIGH 6.3: forgot-password calls sendOtp but no backend phone reset route

Detail: No route handles phone-based password reset.

Fix: Add phone-based password reset route.

HIGH 6.4: Booking flow may not handle insufficient credits

Detail: venue/[slug]/book.tsx may not show credit insufficient scenario properly.

Fix: Add credit check before booking and insufficient balance UI.

MEDIUM 6.5: No push notification handling

Detail: updatePushToken sent but no listener processes incoming notifications.

Fix: Add Expo push notification listener.

MEDIUM 6.6: Paystack callback may not deep-link

Detail: wallet/buy.tsx Paystack callback URL may not return to app.

Fix: Configure Paystack callback with app deep-link.

MEDIUM 6.7: deleteAvatar route verification

Detail: Calls DELETE /users/profile/avatar - verify backend handles it.

Fix: Test and confirm route works.

MEDIUM 6.8: No event ticket check-in QR display

Detail: Event tickets should show QR for check-in but may not render properly.

Fix: Verify QR rendering in event ticket detail.

LOW 6.9: Possible duplicate settings screens

Detail: settings/privacy.tsx + privacy-policy.tsx may duplicate.

Fix: Consolidate and remove duplicates.

LOW 6.10: No offline/partial offline support

Detail: App requires constant network.

Fix: Add basic offline caching for viewed content.

Top 6 Recommendations (Priority Order)

1. Add role to User model + migration

Why: Blocks unauthorized vendor API access. Critical for security.

Scope: [Schema + Migration + Auth middleware update](#)

2. Fix mobile API mismatches

Why: Favorites remove URL, profile update method, add ordersApi. App is broken for these flows.

Scope: [Mobile api.ts + backend route fixes](#)

3. Migrate token store to Redis

Why: Production-critical for OTP/verification. In-memory Map loses tokens on restart.

Scope: [token.service.ts + Redis setup](#)

4. Wire up notification services

Why: Email/SMS functions exist but never called. Users get no confirmations.

Scope: [Reservation + Order services](#)

5. Add missing DB indexes

Why: 10+ tables need vendorId indexes for query performance. Dashboard slow without them.

Scope: [Prisma schema migration](#)

6. Implement cron jobs

Why: Credit expiry + subscription expiry need scheduled execution.

Scope: [Vercel cron config or external scheduler](#)
